

TOMASZ ANDRZEJCZYK

FRONT END DEVELOPER

ABOUT ME

I am a young engineer, entrepreneur and novice programmer.

I am characterized by logical thinking, analytical mind and a highly developed technical sense.

I love to work out the mechanisms and take them apart.

Already during my studies, I noticed that all the above-mentioned features allow me to understand the mechanisms well and learn programming faster.

After discovering my passion, I decided to pursue my career with programming.

I am looking for a job in a company where I can develop my skills, offering my commitment, motivation and constantly developing skills in return.

SKILLS

- TypeScript
- JavaScript
- React
- Redux
- MobX
- HTML5
- CSS3
- Bootstrap5
- CMS WordPress
- English (C1)

EDUCATION

Warsaw University of Life Sciences | 2018-2022

Forestry - finished studies with engineer degree.

Warsaw University of Technology | 2016-2018

Electric and Hybrid Vehicles Engineering

EXPERIENCE

I am currently working as a carpenter in my own business. At the same time, I am developing my skills as a novice programmer.

I also have experience in telephone customer service and as a representative of two car rental companies.

Thanks to these experiences, I am able to work independently, and I also have experience in dealing with contractors.

ZDECHY.PL

Website made entirely by me. It was created for the needs of your own business. The implementation included website design, HTML, CSS and JavaScript code. I used the Bootstrap framework to build the website.

ANDRZEJCZYK-PORTFOLIO.SURGE.SH

On this page I present my skills, created pages and smaller projects in the field of TypeScript, JavaScript, HTML and CSS. It was created in React, using TypeScript. I invite you to familiarize yourself with the "My projects" section.

CURRENT SELF-DEVELOPMENT

I am constantly expanding my knowledge, developing my skills and striving for the highest quality. Currently I am taking part in a four month TypeScript Bootcamp organised by Evolution - the leading provider of live casino systems. There, under the supervision of experienced programmers I'am improving my programming skills, TypeScript, React and many other tools, frameworks and libraries such like: Redux, MobX, WebGL, Pixi.js, Babylon.js.

INTERESTS

I am interested in broadly understood technology, i.e. the processes of creation and transformation of everything around.

I am fascinated by topics broadly understood as technical, from electronics to construction and automotive.

I'm a motorcyclist. Motorcycle tourism allows me to combine traveling with my interest in nature. I love tinkering and creating, which I turned into my first business - creating craft wooden furniture.

I am curious about the world and I like to take advantage of development opportunities - during my forestry studies I took a practical course, obtaining the title of a licensed lumberjack.
